In the living room on the ground floor, kitchen, entrance hall and bathrooms, the floor is tiled.
It has electric interior blinds in the living rooms and bedrooms (embedded in the living rooms) and those in the ground floor room in black-out. The blinds in the rooms have a remote control (2020).
Air conditioning system in the master suite and in the hall of the rooms being controlled by WiFi. (2020)
General alarm system that can be activated by sections. There are control mixers next to the main entrance door, in the garage and in the hall of the rooms, which can be activated in one of them depending on the circumstances.
Interior garage door, covered with wood, electric with remote control.
Conduit for laundry from the master suite to the laundry room.
Automatic interior lighting when approaching the stairs. Room balcony lighting with dimmer.
Double glazing in oscillating-wooden frames and parallel corridors with granite sills and windowsills
In the corridors of the 3 floors there is an emergency light that turns on in the event of a power failure.
In all divisions there is an installation for landlines / internet and a cable television system. The TV and Internet system comes to the home via fiber optic cable.
The house has a central vacuum system and glutton in the kitchen. The engine is located in the garage (2019).
A sound diffusion system is installed in all divisions of 2 floors (ground floor and 1st floor) as well as outside, in the pool area.
The main electrical panel has meters of energy produced and consumed (instantaneous, hourly, daily, monthly and yearly) and with a record of history on its own website, whose data can be consulted on the computer, mobile phone or iPad.
EXTERIOR
Fence wall surrounding the stone house.
External entrance gates in stainless steel and electric vehicles with remote control.
Video intercom with image and sound.
Speed â€‹â€‹home camera 360º in front, programmable, fixed camera in the pool area and 4 mobile cameras facing the extrior but placed inside the house, with accessibility and control via computer, mobile phone or ipad. All cameras have an image recorder (2020).
Automatic exterior lighting on approach, by built-in spotlights, around the entire dwelling.
The locks on the exterior doors (3) have an access code and / or magnetic card as well as a security lock. (2019)
The balcony of the 1st floor room and the terrace of the ground floor room have electric outdoor awnings, controlled from a distance.
The bedroom balcony on the 3rd floor has an adjoining planter.
The garden has an automatic irrigation system.
The pool has dimensions of 4 x 8 m2 with a semi-automatic cover that collects into the engine room (10 m2). There you will find all the equipment of the pool, including the programmer for recycling, as well as a small workshop. If desired, a source can be activated that works in parallel with recycling. The pool has an automatic vacuum cleaner, independent, which can be controlled by mobile phone via Bluetooth.
Barbecue area (with night lighting) by the pool with peep and tap.
Rainwater harvesting system for irrigation with deposits and associated engine.
There is a water intake by hole, for irrigation, or filling the pool, with an associated motor.
These systems are independent of the supply of drinking water to the home.
On the terrace there is a solar thermal panel for heating water with a deposit of 150 liters. It has an electrical resistance in case of need. It has a position for winter and another for summer.
Also on the terrace, and facing south, a system of microproduction of energy through photovoltaic panels with a power of 3.64 Kw is installed. At this time, production is only intended for own consumption. As it has already been used to sell the energy produced, there is an installation prepared for this purpose, now inactive, but which can be resumed a day later, if desired.
